All Data Contributors will have access to a Dashboard of free reports which they can run at any time. The Report Details are:

Report Name	Purpose
COVID19 Antibody Results	The purpose of this report is to aggregate COVID19-specific antibody testing results in the Reliance data set.
COVID19 Symptoms & Comorbidities	Identifies patients with symptoms related to COVID-19, along with demographic information, and the relevant DX code found in the record. For each of those identified patients, it also looks back in the longitudinal record for whether the patient has a diagnosis of the following comorbidities: diabetes, hypertension, vascular disease, respiratory failure, and pulmonary disease.
COVID19 Lab Results	Identifies lab results specific to COVID-19, along with demographic information.
Depression Screen	Patients aged 12 and older screened for clinical depression using an age appropriate standardized depression screening tool but were missing follow-up on the date of the positive screen.
Diabetes Management	Patients 18-75 years of age with who had hemoglobin A1c greater than the user defined threshold (Default: 7.0%).
ED Visits	List of patients who have visited the Emergency Department. The output shows how many times a patient has visited the ED
HIV Positive	This report identifies patients that may be HIV positive. UMLS coding concept: 2.16.840.1.113883.3.464.1003.120.12.1003
Homeless	List of potentially homeless patients identified by annotations made by healthcare providers, a given home addresses of a hospital, homeless shelter or place of worship and variations of text and standard code set identification extracted from transcribed clinical records.
Hospital Discharge	Identifies patients that have been discharged from an emergency or inpatient hospital visit. This report uses the ADT A03 trigger event and patient class is "inpatient" or "Emergency" to identify patient discharges.
Hypertension	Patients 18-85 years of age whose blood pressure is greater than the user defined threshold (Default: 125/90mmHg).
LAB Results	Identifies if patient results are available for viewing.
Positive Pregnancy	Real time identification of pregnant population
Positive Pregnancy + Opioid Dx	Identifies patients with a positive pregnancy screening and have a diagnosis of opioid abuse. UMLS coding concepts: 2.16.840.1.113883.3.666.5.1595
Opioid Use	Identifies patients with a diagnosis of opioid abuse. UMLS coding concept: 2.16.840.1.113883.3.464.1003.106.12.1004
Readmissions	List of readmissions within the measurement period that occurred less than 30 days before last discharge from a hospital.
SBIRT	Patients aged 12 and older who received appropriate "screening, brief intervention, and referral to treatment" (SBIRT) for alcohol or other substance abuse.
Tobacco	Patients aged 13 and older screened and positive for cigarette smoking and/or tobacco use.

To Run a report:

1. Log in to the CHR: https://reliancehie.net
2. Select the Notification Report you wish to run

3. Define the parameters you would like to run and click **Run with parameters**.
   Note: *Each report has been preset to default parameter that can be adjusted. If the results are greater than 1000 records the output can be viewed in the CSV download.*

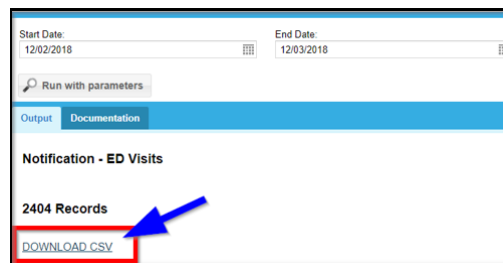

Helpful Tips

To access/review the individual Patients' Community Health Record, click on the mpid_CHR icon in the first column.

To see all data rows associated to a report download a .CSV version of the report

To view information regarding the purpose of the report click the Documentation Tab

To review the purpose and parameters of all reports click the Reports Catalog tile.
